TODAY & TOMORROW

A new program to involve inner-city youth creatively in the issues of teen sexuality has been launched by UC-San Francisco at SFGH.

The UCSF Teen Family Life Theater, one of the community outreach efforts of the Teen Family Planning Project of the Department of Obstetrics and Gynecology at SFGH, has recruited a company of multi-ethnic teens from five high schools — Mission, Woodrow Wilson, John O'Connell, Balboa and Downtown.

After training in peer education and drama skills, these young actors and actresses will use improvisational theater techniques to develop their own scripts for a series of one act plays based on teen life experiences. Fifteen performances, scheduled to begin in December, will be presented in Spanish and English in high schools and before community organizations and parents' groups. The performances will be used to introduce workshops in which teens can express their feelings about decision making, communication, parent-teen relations, sex roles and related issues.

Terry Looper is producer for the Teen Life Theater, associate producer is Richard Woo.

A new program in nursing education, the only one of its kind in the country, has been awarded a three-year grant of $347,226 by the Division of Nursing, Health Resources Administration, DHHS. The program, already underway, is the combined bachelor and master of science in nursing degree curriculum at the School of Nursing.

Designed for registered nurses who have completed hospital and community college courses, the UCSF Articulated BS/MS degree program is a three-year program that prepares students to become advanced level clinicians, nursing educators and administrators.

Project director of the grant is Holly Skodol Wilson, associate dean, Academic Programs and associate professor, Department Mental Health and Community Nursing. Co-director is William L. Holzemer, coordinator, Program Research and Development and assistant professor, Department of Nursing in Biological Dysfunction. The grant is earmarked for implementation and evaluation of the program.

Faculty officers for the four schools for the 1980-81 academic year are:
School of Dentistry — John S. Greenspan, chairperson (Oral Medicine and Hospital Dentistry); Gary C. Armitage, vice-chairperson (Periodontology); Samuel J. Wycoff, secretary (General Dentistry);
School of Medicine — R. Curtis Morris, chairperson (Medicine); J. Richard Baringer, vice-chairperson and secretary (Neurology);
School of Nursing — William L. Holzemer, chairperson (Biodysfunction); Linda Chafetz, vice-chairperson (Mental Health and Community Nursing); Janet Rosenauer, secretary and treasurer (Mental Health and Community Nursing);
School of Pharmacy — Betty-ann Hoener, chairperson (Pharmacy and Pharmaceutical Chemistry); Irwin D. Kuntz, Jr., vice-chairperson (Pharmaceutical Chemistry/Pharmacy); L. Dallas Tuck, secretary (Chemistry/Pharmaceutical Chemistry).

Due to the University Christmas holiday, which extends from Thursday, January 1 to Sunday, January 4, paychecks will be in employees' hands on Friday, January 2 for those individuals who normally get checks in the U.S. mail, and Monday, January 5, for employees who normally get checks through campus mail. It is not considered practical to mail the checks in the 1980 calendar because it would result in 13 months' earnings reported on the W-2 forms. Individuals who do not want to wait until January 5 and prefer that their check be mailed home, should send their name, home address, employee number, and name of department to: Payroll, 322 CED. Payroll must receive this information no later than 5 p.m., Friday, December 12.

In addition, there will be several changes in the 1981 paychecks. Individual employees who pay Social Security tax as part of their retirement program, will have an increase from 6.13% to 6.65%. State income tax has been slightly decreased due to "indexing" legislation which requires an inflation factor be used to determine the amount withheld. In addition, life insurance rates have changed as follows for each $1,000 of coverage: under age 35: from .20 to .18; ages 35-39: from .30 to .27; ages 40-44: from .35 to .31; ages 45-49: from .55 to .49; ages 50-54: from .75 to .56; ages 55-59: from .75 to .79; ages 60-64: from .75 to .90; age 65 and over: from .75 to 1.12.

SFGH's Surgery Clinics have been named in memory of Muriel Steele, UCSF associate professor of Surgery, who died October of last year. Steele, a graduate of Stanford, was one of only three women trauma surgeons in the U.S. and a pioneer in the treatment of critical injuries.

A bronze plaque was presented by Donald D. Trunkey, professor and vice-chairman of Surgery and SFGH chief of Surgery, to Sandie Libby, head nurse of the Surgery Clinics, which Steele was responsible for developing.

In addition, awards were presented to two women surgery residents "who best exemplified the attributes of Dr. Steele." Tonao Wang, UCSF School of Medicine (1980 winner) and Terese Bicknell, Stanford School of Medicine (1981 winner) received $500 each. Awards will be presented annually. Contributions to the Muriel Steele Fund may be sent to Donald D. Trunkey, Surgery Service, 3A30, SFGH, S.F., CA 94110.

Herbert W. Boyer, professor of Biochemistry has received the prestigious Albert Lasker Medical Research Award for basic research. He shares the $15,000 award with Nobel Prize winner Paul Berg, Stanley Cohen and A. Dale Kaiser, all of Stanford.

The Lasker awards, given annually by the Albert and Mary Lasker Foundation, recognize outstanding work in basic science and clinical, or applied medicine. A total of nine scientists were presented the awards totalling $45,000 this year for their work on DNA, high blood pressures and a vaccine to prevent a blood disorder of the newborn. The Lasker prizes are the closest U.S. equivalent to the Swedish Nobel prizes.

Boyer and other scientists at UCSF and the City of Hope are responsible for demonstrating that synthesized DNA can be inserted into bacteria and function as its natural counterpart. The scientists are responsible for the first successful production of a medically useful hormone — somatostatin — produced in bacteria.

Nutrition UCSF: A Resource Guide to Courses, Services and Research, has just been completed by Marion Nestle, associate dean, School of Medicine and Charles Evans, a third-year medical student. In addition to 16 nutrition courses that UCSF offers, the guide lists numerous nutrition services offered to S.F. by various departments at UCSF, SFGH and the VAMC. It also carries a listing of nutrition-related research currently being conducted by approximately 100 faculty members at these institutions.

The guide will be especially useful to health care professionals, social workers, counselors and educators. It was made possible through a grant from the Bureau of Health Manpower, Health Resources Administration, Department of Health and Human Services and is available by writing to the Office of the Dean, School of Medicine, S 224.

In addition, Nestle will be featured on KQED-TV's "Over Easy" speaking on "High Fiber" on Wednesday, December 17 and "Obesity and Weight" on Tuesday, December 30. The Channel 9 show is aired at 7:30 p.m. and 12:30 p.m. the following day.
